Do you have any additional suggestions or feedback to make the system more user-friendly?

5 out of 5 answered

I would appreciate if the design is more colorful

There are so many options for security lock user should have the control to choose which biometric or backup code he wants to choose.

I would like you to add a consent button to the interface and upon pressing that button it will pop up a message which will remind the user that they have given their consent to the app to store their biometric information

The overall design is good, color would add liveliness to the design

I think to make it more attractive you should use some colour in the design
